|---------------------|--|
| STUDENT NAME | |
|---------------------|--|

PROGRAMS

| | | |
|----------------|---|----|
| INVALID | <p>5 invalid test programs [1 point each]</p> <p>(a) Program is invalid according to the reference compiler</p> <p>(b) Program shows a unique declaration or typechecking error</p> | /5 |
|----------------|---|----|

IMPLEMENTATION

| | | |
|---|--|-----|
| AST | <p>Compiler generates an AST for syntactically valid programs</p> <p>(a) AST is correctly generated [2 points]</p> <p>(b) AST contains no CST nodes or extra tokens [2 points]</p> | /4 |
| PRETTY PRINTING | <p>pretty compiler option outputs pretty printed code to stdout</p> <p>(a) Output is valid MiniLang and equivalent to the input [2 points]</p> <p>(b) Output is "pretty" (tabs, newlines, spaces, etc.) [2 point]</p> | /4 |
| SYMBOL TABLE & TYPE-CHECKING | <p>symbol compiler option outputs the symbol table to stdout</p> <p>(a) Symbol table contains all declared variables [1 points]</p> <p>(b) Identifiers are associated with the correct type [1 point]</p> | /2 |
| | <p>Compiler is tested on a set of valid MiniLang programs using the typecheck option. For each test case, the compiler must exit with status code 0 and output OK</p> | /5 |
| | <p>Compiler is tested on a set of invalid MiniLang programs using the typecheck option. For each test case, the compiler must exit with status code 1 and output Error: <description></p> | /4 |
| | <p>Compiler generates appropriate error messages for invalid programs</p> | /1 |
| CODEGEN | <p>Compiler is tested on a set of valid MiniLang programs using the codegen option</p> <p>(a) Generated code is valid C [4 points]</p> <p>(b) Generated code has the correct semantics [4 points]</p> <p>(c) Generated code is well written and efficient [2 points]</p> | /10 |
