

STUDENT NAME	
---------------------	--

PROGRAMS

VALID	2 valid test programs [2.5 points each] (a) Program is valid according to the reference compiler (b) Program computes the solution to a real world problem	/5
INVALID	5 invalid test programs [1 point each] (a) Program is invalid according to the reference compiler (b) Program shows a unique scanner or parser error	/5

IMPLEMENTATION

VALID	The scanner and parser are tested on a set of valid MiniLang programs. For each test case, the compiler must exit with status code 0 and output OK	/6
	Given a complete MiniLang program (a) The tokens keyword generates the complete list of tokens (b) Tokens are output with their respective value if appropriate (i.e. string contents)	/2
INVALID	The scanner and parser are tested on a set of invalid MiniLang programs. For each test case, the compiler must exit with status code 1 and output Error: <description>	/7
	Compiler generates appropriate error messages for invalid programs	/1
CODE QUALITY	Evaluating the quality of your submission (a) Code runs with no modifications on the Trottier machines (appropriate build.sh and run.sh scripts) [2 points] (b) Code is organized, well written, and well tested [2 points]	/4
