

**Course Name:** Computer Programming for Physical Sciences and Engineering  
COMP 208 Fall 2020

**Instructors:** Section 1 - David Becerra

Office: TBD

Email: [david.becerra@mcgill.ca](mailto:david.becerra@mcgill.ca)

Office Hours: T TH 16:00 Zoom or by appointment

Home Page: TBD

Section 2 - Joseph Vybihal

Office: ENGMC 323

Email: [joseph.vybihal@mcgill.ca](mailto:joseph.vybihal@mcgill.ca)

Office Hours: T 10:00 Zoom (after class)

TH 16:00 Slack or by appointment

Home Page: <http://www.cs.mcgill.ca/~jvybihal>

### Course Objectives:

Welcome to COMP-208! Please read this document carefully and keep it for reference throughout the term. This course introduces students to computer programming and is intended for those with little or no background in the subject. No knowledge of computer science in general is necessary or expected. On the other hand, basic computer skills such as browsing the Web, sending email and other such fundamental tasks will be necessary in this course.

The course uses the Python programming language. Python is an example of a programming language (as are Java, C++, and many others). A large part of this course will focus on the basic building blocks of programming, which provide the foundations to learning other languages such as Java or C++.

Learning how to program is not easy; it is not a set of facts that one can simply memorize. In principle, a computer program is simply a set of instructions that tells a computer to perform a task. However, finding the right set of instructions can be quite challenging. For that, one has to learn how to structure a larger problem into small subsets, and then find the solution to each particular subset. This course aims to teach students a way of thinking that will enable them to build non-trivial programs.

### Primary learning objectives:

By the end of this course, students will be able to:

- Design and describe precise, unambiguous instructions that can be used by a computer to solve a problem or perform a task;

- Translate these instructions into a language that a computer can understand (Python);
- Write programs that solve complex problems by decomposing them into simpler subproblems;
- Apply programming style and structure conventions to make programs easy to understand, debug and modify;
- Learn independently about new programming-language features and libraries by reading documentation and by experimenting;
- Solve basic problems in scientific computing, including numerical methods such as root finding, numerical integration, and systems of linear equations.

**What this course is NOT about:**

This course is not about how to use a computer. It will not teach you how to send email, browse the Web, create word processing documents or spreadsheets, setup and configure a computer, use specific software applications (except those needed to complete coursework), design Web pages, or deal with operating system or hardware problems. However, the course offers introductory tutorials that provide instruction in aspects of computer usage necessary to complete coursework.

**Pre-requisites:** MATH 141 or equivalent

**Co-requisites:** MATH 133 or equivalent

**Note:** We assume you have knowledge in derivation, integration, and basic linear algebra.

**Restrictions:**

Credit can be given only for one of COMP 202, COMP 204, or COMP 208. COMP 208 cannot be taken for credit with or after COMP 250 or COMP 206. COMP 202 is intended as a general introductory course, while COMP 208 is intended for students with sufficient math background and in (non-life) science or engineering fields.

**Required Software:**

- Python IDE <https://wingware.com/downloads/wing-101>
- myCourses TBD
- Piazza [https://www.youtube.com/watch?v=j7I\\_T3p-NPE](https://www.youtube.com/watch?v=j7I_T3p-NPE)
- Perusall TBD
- PeerGrade [https://www.youtube.com/playlist?list=PLNu8YHd\\_hUdG1qGX8u5JLWNkzJU0hy61i](https://www.youtube.com/playlist?list=PLNu8YHd_hUdG1qGX8u5JLWNkzJU0hy61i)

**Textbook:**

There is no primary mandatory textbook for this course. We will be using a flipped approach with a diverse set of materials and resources, which will be made available on myCourses.

If you would like to consult a free, online textbook, you can use the following:

Think Python 2e, by Allen B. Downey. Available at no cost under the terms of the Creative Commons Attribution-NonCommercial 3.0 Unported License at <https://greenteapress.com/wp/think-python-2e/>

**Teaching Method / Course Delivery:**

- Weekly Video + Quiz x 12
- In-class problem solving (flipped class)
- Weekly mini assignment x 12 = Perusall activity x 2 / PeerGrade activity x 2 / Programming x 8
- Assigned TA lab time with designated lab material
- Survey x 2 (using myCourses + video) + Meta Skills x 2 (using Perusall + video)

This course will follow the flipped classroom format. What this means in our case is that lectures will be distributed to the student via videos. Each video will be posted on MyCourses every Friday morning and will present the material for the following week. The student will watch the video over the weekend. Students can ask questions to the professors and TAs and help each other using Piazza. Each video will end with a link to a short quiz and a mini-assignment. The quiz must be completed before class time, for grades. The mini-assignment is due within 7 days, for grades. Class time will be a problem solving and Q&A experience using the Zoom app. The professor will present additional expanded material related to the video and then three of four problems which will be solved together with the professor during class. There will also be live coding led by the instructor to show practical implementations of the theory explained in the video. Since the course is conducted remotely, to enrich the student experience, we will use additional tools, like Perusall and PeerGrade, along with traditional methods like myCourses quiz tool, assignments and tests. We will describe how to use these tools in class and during labs with the TA.

It is important to mention that we will assume that the majority of our Comp208 students have never programmed before as we introduce you to the wonderful and exciting world of computer programming.

## Grading

Work	Weight	Comment
<b>Lecture Quiz</b> (12)	12 %	At the start of weeks 2 to 13, watch the videos and complete the quizzes. 1% each.
<b>Mini-Assignments</b> (12)	48%	By the end of weeks 2 to 13, complete a small exercise (assignment) to demonstrate your understanding. 4% each. Perusall activity x 2 / PeerGrade activity x 2 / Programming x 8
<b>Surveys</b> (2)	2%	These surveys provide information about your experience, and allow us to adjust the course to make your experience better. You will get a 2% credit once you complete <i>both</i> surveys
<b>Meta-Skills</b> (2)	4%	You will get a 4% credit once you complete 2 of the MetaSkills modules. that will be provided to you at different points during the term. Each will be a short module taking 30 minutes that help you learn "meta" skills valuable to being a student, such as planning & goal-setting, managing stress, motivating yourself.
<b>Final exam</b> (1)	34%	Final exam, during the exam week.

## Tentative Course Outline

Week	Video (Friday 9 AM)	Flipped Class (Tu & Th)	Readings	Work (due Fri 5pm)
Th Sep 3	XXXXXXXXXXXXXXXXXXXX	Introduction to course	XXXXXXXXXX	Get account for Piazza, myCourses, Install Python, Install IDE
Sep 7	Python basics, Shell and Prompt, Statement, values, Expressions 1, Operator, Types, Errors (syntax), functions 1.	Exercise Arithmetic Operators. Exercise Types. Exercise Variables (swapping). Exercise Errors.	Binary numbers. Operator precedence. Memory model.	Mini 1 - Perusall (Binary numbers)
Sep 14	Strings 1, variables, expressions 2, functions 2 (built-in and customized). Debugging options.	Exercise built-in functions. Exercise design functions. Exercise reuse functions (call) Exercise nested functions	Design of functions. Docstring. Debugging.	Survey #1 Mini 2 - PeerGrade (Students design and comment functions, other students evaluate how clear it was)
Sep 21	Boolean, conditionals, Strings 2, indexing, slicing	Exercise booleans. Exercise if statements. Exercise strings operations Exercise strings methods.	String built-in functions	Mini 3 - Program
Sep 28	Loops (for and while)	Exercise for loop over strings. Exercise while loops. Exercise, same problem using for, for range and while. Exercise nested loops.		Meta Skill #1 Mini 4 - Program
Oct 5	Lists(normal, parallel, nested), mutable VS immutable, Dictionaries	Exercise for loops over lists. Exercise for List operations and methods. Exercise for parallel strings and lists. Exercise for nested lists.	Aliasing	Mini 5 - Program

Oct 12	Dictionaries, Exceptions, Files IO, Libraries	Exercise for dictionaries. Exercise for files. Exercise for exceptions.		Survey #2 Mini 6 - Program
Oct 19	Matplotlib, Numpy, Sorting	Exercise sorting. Exercise Matplotlib. Exercise Numpy		Mini 7 - Perusall
Oct 26	OOP	Exercise		Mini 8 - PeerGrade
Nov 2	Coding a full project?	Taking the 1.5 hours to code a full project. The project is split in 3 big functions.		Meta Skill #2 Mini 9 - Program
Nov 9	Integration, Systems of equations			Mini 10 - Program
Nov 16	Roots, regression, curve-fitting			Mini 11 - Program
Nov 23	Random # & walks, MC methods	Exercise random numbers.		Mini 12 - Program
Tu Nov 30	XXXXXXXXXXXXXXXXXXXX	Review class ??	XXXXXXX	XXXXXXXXXXXXXXXX
TBD	Final Exam			

## General Information

### Communication:

- **My Courses:** All official communication, including announcements, lecture material, assignments, grades will be found on My Courses.
- **Course Discussions:** The online free tool, piazza.com, is used as our course discussion board. Please make sure to enroll in the Fall 2020 COMP 208 course on Piazza. Use this as your primary communication medium, since your questions are public and can help other students.
- **Private Email:** The professor and TA have private email accounts that you may also use, however these communication channels are for personal queries. For example: if you have a problem with your grade then email the TA who graded you directly, do not email the prof and do not use the course email address.
- **Appointments:** Please email directly the one you want to communicate with to book at appointment outside office hours.
- **Office Hours:** Please take a look at all posted office hours. Come to those times without appointment.
- **After lecture:** Some optional time will be available just after class to ask questions. I do not guarantee the length of this time since other constraints may interfere.
- **Email Policy:** E-mail is one of the official means of communication between McGill University and its students. As with all official University communications, it is the student's responsibility to ensure that

time-critical e-mail is accessed, read, and acted upon in a timely fashion. If a student chooses to forward University e-mail to another e-mail mailbox, it is that student's responsibility to ensure that the alternate account is viable. Please note that to protect the privacy of the students, the University will only reply to the students on their McGill e-mail account.

**CommunicationAlgorithm() :**

```

if (public) piazza(); // all will benefit
else if (about marks) emailTAPrivately();
else if (medical or special) emailProfPrivately();

```

**Assignments & Tests:**

- **Assignments Delivery:** All assignments are submitted to and picked-up from myCourses, PeerGrade or Perusall. In other words, if you picked up your work from myCourses then you submit it to myCourses. If you picked it up from Perusall then you drop it off at Perusall, etc.
- **Late Policy:** You will be notified in advance of assignment due dates. All assignments are due on myCourses at the indicated time and date. Late assignments will lose 5% of its grade per day late. Assignments beyond 2 days late will not be accepted. You may not submit assignments via e-mail without the permission of the instructor.
- **Additional Work:** Students with grades of D, F or J will not be given the opportunity to complete additional work to upgrade their grade.
- **Grading Policy:** No make-up tests or make-up assignments are allowed in this course. If you are not satisfied with the grading of an assignment or test, you may request a review within 7 days of return. Indicate in writing or during a meeting with the TA where and why you feel the marks are unjustified and give it back to your TA for re-grading. Note that the entire assignment or mid-term test will be re-graded, and your grade can go up or down (or stay the same) accordingly. The TA may forward the issue to the instructor.
- **Re-grading:** Mistakes can occur when grading. Not surprisingly, requests for re-grading always involve those mistakes in which the student received fewer points than they deserved, rather than more points than they deserved. With that in mind: if you wish me to re-grade a question on an exam or assignment, I will do so. I reserve the right to re-grade other questions as well.
- **Cheating/Collaboration:** Collaboration is encouraged but your discussions should be public in the sense that anyone including the professor should be allowed to listen in. Assignments are original works created by the student alone. You are permitted and encouraged to have conversations with other students concerning the contents of the assignments and how to do them, but your work must be original. If two or more assignments are found to be identical (or portions of assignments) then all parties will lose points. This includes the student who permitted their assignment to be copied. This includes written solutions and software source code.
- **Exam Policy:** Students are responsible for all materials for the tests and exams. Exams will be a combination of all types of questions based on all sources, and students may be required to integrate theoretical concepts from the text to substantiate their arguments. Crib sheets, calculators, dictionaries are not permitted during an exam or test unless specifically stated by the professor.
- **A supplemental exam** is possible to replace the grade of your final exam.
- **Calculators:** Only non-programmable, no-tape, noiseless calculators are permitted. Calculators capable of storing text are not permitted in tests and examinations.
- **Dictionaries:** Dictionaries are not permitted, but translation dictionaries are.

- **Handheld Devices:** Handheld devices capable of storing text and having calculator functionality (e.g. Palm, etc.) are not permitted.

### Your TA:

- Each student is assigned a single TA who will be “their” TA for the entire course. This TA will be responsible for grading your assignments and this TA will hold weekly tutorials for their assigned group, which you can attend optionally.
- Regardless, you can attend any TA office hour for help.
- The table below identifies which TA you have been assigned to. The full details about all the TAs of this course can be found in myCourses.
- Your TA will contact you to determine the best time to hold the weekly tutorial. It might happen that a common time is impossible to find. In that case, the TA will find a tutorial time that maximizes the number of attending students. Do not worry if you cannot attend. These tutorials are optional, and the work is posted on myCourses, so you can do them on your own and then go to any TA office hour for help.

Group	Student Last Name	TA Name	TA Email
1	(40) A-Bru	David Collins	david.collins5@mail.mcgill.ca
2	(40) Buc-Elk	Harsh Satija	harsh.satija@mail.mcgill.ca
3	(40) Ene-He	Shantanil Bagchi	shantanil.bagchi@mail.mcgill.ca
4	(40) Hem-Lam	Simita Kundu	simita.kundu@mail.mcgill.ca
5	(40) Lama-Mai	Tianchi Ma	tianchi.ma@mail.mcgill.ca
6	(40) Mak-Pec	Yang Chen	yang.chen4@mail.mcgill.ca
7	(40) Pel-Shi	Ayush Jain	ayush.jain@mail.mcgill.ca
8	(40) Shp-Wang,Q	Michael Huang	zhongshi.huang@mail.mcgill.ca
9	(32) Wang,R-Z	Yaixin Li	yaixin.li@mail.mcgill.ca

### Additional Information:

The course slides are not meant as a complete set of notes or a substitute for a textbook, but simply constitute the focus of the lecture. Important gaps are left in the slides that are filled in during class, thus lecture attendance should be considered essential.

### The material covered in the classroom will be used to supplement textbook readings.

Every chapter should be read twice. The first reading should be done prior to attending class and the second reading should be done after the class discussion of the chapter. The questions at the back of each chapter follow

directly from the reading. Students should be able to answer these questions after a thorough reading of the material.

**Right to submit in English or French written work that is to be graded.**

In accord with McGill University's Charter of Students' Rights, students in this course have the right to submit in English or in French any written work that is to be graded.

**Academic Integrity:** *Code of Student Conduct*

McGill University values academic integrity. Therefore all students must understand the meaning and consequences of cheating, plagiarism and other academic offences under the Code of Student Conduct and Disciplinary Procedures (see [www.mcgill.ca/integrity](http://www.mcgill.ca/integrity) for more information).

L'université McGill attache une haute importance à l'honnêteté académique. Il incombe par conséquent à tous les étudiants de comprendre ce que l'on entend par tricherie, plagiat et autres infractions académiques, ainsi que les conséquences que peuvent avoir de telles actions, selon le Code de conduite de l'étudiant et des procédures disciplinaires (pour de plus amples renseignements, veuillez consulter le site [www.mcgill.ca/integrity](http://www.mcgill.ca/integrity)).

**Final Exam Policy:** *Regulations*

Students should not make other commitments during the final exam period. Vacation plans do not constitute valid grounds for the deferral or the rescheduling of examinations. See the Centre Calendar for the regulations governing Examinations: <https://www.mcgill.ca/exams/regulations>

Students are required to present their I.D. Card (with photo) for entrance to their examination.

**Final Exam Policy:** *Conflicts*

If you are unable to write your final examination due to scheduling conflicts, you must submit a Final Exam Conflict Form with supporting documentation at least **one month** before the start of the final examination period. Late submissions will not be accepted. For details, <https://www.mcgill.ca/exams/dates/conflicts>

**Final Exam Policy:** *Exam Timetable*

Examination schedules are posted at the Centre and on the following page approximately 6-8 weeks before the examination period commences <https://www.mcgill.ca/exams/dates>

The Centre cannot provide examination dates over the telephone.

**Student Rights and Responsibilities:**

Regulations and policies governing students at McGill University can be downloaded from the website: <https://www.mcgill.ca/students/srr/>

**Students Services and Resources:**

Various services and resources, such as email access, walksafe, library access, etc., are available to McGill students: <https://www.mcgill.ca/studentsservices/>

Various services and resources are offered to computer science students: <https://mcgill-csus.ca/>

**Minerva for Students:** <http://www.mcgill.ca/minerva-students/>

### **Important Note:**

In the event of extraordinary circumstances beyond the University's control, the evaluation scheme in a Course is subject to change, provided that there be timely communications to the students regarding the change.

### **Land acknowledgement:**

McGill University is on land which has long served as a site of meeting and exchange amongst Indigenous peoples, including the Haudenosaunee and Anishinabeg nations. We acknowledge and thank the diverse Indigenous people whose footsteps have marked this territory on which people of the world now gather. Please see here for more details: <https://www.mcgill.ca/edu4all/other-equity-resources/traditional-territories> .
