

# PROGRAMING CHALLENGES

## COMP321

### ASSIGNMENT 7

#### Solving the problems I give you.

The list of the problems that we will solve for this assignment is as follows. Please choose two (out of 7) of the following problems. Please note that these problems correspond to the same problem set that you started solving during the contest of last Saturday.

1. **Numbers On a Tree** (<https://open.kattis.com/problems/numbertree>)
2. **Bachet's Game** (<https://open.kattis.com/problems/bachetsgame>)
3. **Frosh Week** (<https://open.kattis.com/problems/froshweek>)
4. **Driving Range** (<https://open.kattis.com/problems/drivingrange>)
5. **Biggest Slice** (<https://open.kattis.com/problems/biggest>)
6. **White Water Rafting** (<https://open.kattis.com/problems/rafting>)
7. **Natrij** (<https://open.kattis.com/problems/natrij>)

Please remember that the assignment must be solved individually. What I expect from you is the following.

1. A .pdf file uploaded in mycourses (please upload it in the 'Assignment7' folder). This .pdf must be named Assignment6\_ID.pdf, where ID is your McGill id number. Inside the pdf file you must copy/paste the acceptance notifications that you received from Kattis.
2. You must submit the code that you used in your submission. The files must be named Problem\_ID.extension, where 'Problem' is the name of the problem and ID is your McGill id and 'extension' is the program extension (.py, .java, .c or .cpp). Please add comments to your code.

The due date for this assignment is Saturday March 25th before 10 am.
