

Algorithm Design  
COMP 360 SEC 001  
2:00 PM April 27, 2018

EXAMINER:	Hamed Hatami	ASSOC. EXAMINER:	Adrian Vetta

STUDENT NAME:		McGILL ID:																	
---------------	--	------------	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

### INSTRUCTIONS

<b>EXAM:</b>	CLOSED BOOK <input checked="" type="checkbox"/>	OPEN BOOK <input type="checkbox"/>
	SINGLE-SIDED <input checked="" type="checkbox"/>	PRINTED ON BOTH SIDES OF THE PAGE <input type="checkbox"/>
	MULTIPLE CHOICE <input type="checkbox"/> <small>Note: The Examination Security Monitor Program detects pairs of students with unusually similar answer patterns on multiple-choice exams. Data generated by this program can be used as admissible evidence, either to initiate or corroborate an investigation or a charge of cheating under Section 16 of the Code of Student Conduct and Disciplinary Procedures.</small>	
	ANSWER IN BOOKLET <input type="checkbox"/> EXTRA BOOKLETS PERMITTED: YES <input checked="" type="checkbox"/> NO <input type="checkbox"/>	
	ANSWER ON EXAM <input checked="" type="checkbox"/>	
	SHOULD THE EXAM BE:	RETURNED <input checked="" type="checkbox"/> KEPT BY STUDENT <input type="checkbox"/>
<b>CRIB SHEETS:</b>	NOT PERMITTED <input type="checkbox"/>	PERMITTED <input checked="" type="checkbox"/> <small>e.g. one 8 1/2X11 handwritten double-sided sheet</small>  <u>Specifications:</u> One handwritten double-sided letter size sheet
<b>DICTIONARIES:</b>	TRANSLATION ONLY <input type="checkbox"/>	REGULAR <input checked="" type="checkbox"/> NONE <input type="checkbox"/>
<b>CALCULATORS:</b>	NOT PERMITTED <input checked="" type="checkbox"/>	PERMITTED (Non-Programmable) <input type="checkbox"/>
<b>ANY SPECIAL INSTRUCTIONS:</b>		

1	2	3	4	5	6	7	<b>Total</b>
/15	/15	/15	/15	/10	/15	/15	<b>/100</b>

1. Write a maximization linear program in two variables such that the boundary of its feasible region is the square with vertices  $(-1, 0)$ ,  $(0, 1)$ ,  $(1, 0)$ ,  $(0, -1)$ , and whose optimal solution has value 5 and is given only by the point  $(0, -1)$ .

2. Either prove that the following problem is NP-complete or show that it belongs to P by giving a polynomial time algorithm:
- Input: An undirected graph  $G$ , two nodes  $s, t$  and a positive integer  $k$ .
  - Question: Is there a path of length at least  $k$  between  $s$  and  $t$ ?

3. Either prove that the following problem is NP-complete or show that it belongs to P by giving a polynomial time algorithm:

- Input: A flow network and a positive integer  $k$ .
- Question: Is there a maximum flow  $f$  such that the total sum of the flow on all of the edges is at most  $k$ ? That is  $\sum_{e \in E} f(e) \leq k$ , and  $f$  is a maximum flow?

4. Either prove that the following problem is NP-complete or show that it belongs to P by giving a polynomial time algorithm:
- Input: An undirected graph  $G$ .
  - Question: Does  $G$  have a proper colouring with three colours  $R, G, B$  that assigns the colour  $B$  to exactly one vertex?

5. Given a set  $P$  of  $n$  points on the plane, consider the problem of finding the smallest circle containing all the points in  $P$ . Show that the following is a 2-factor approximation algorithm for this problem. Pick a point  $x$  in  $P$ , and set  $r$  to be the distance of the farthest point in  $P$  from  $x$ . Output the circle centered at  $x$  with radius  $r$ .

6. Consider the triangle elimination problem. We are given an undirected graph  $G = (V, E)$ , and want to find the smallest possible set of vertices  $U \subseteq V$  such that deleting these vertices removes all the triangles (i.e. cycles of length 3) from the graph. Prove that one of the following algorithms is a 3-factor approximation algorithm, and the other one is not.

**Algorithm I:**

- While there is still a triangle  $C$  left in  $G$ :
  - Delete all the three vertices of  $C$  from  $G$
- EndWhile
- Output the set of the deleted vertices

**Algorithm II:**

- While there is still a triangle  $C$  left in  $G$ :
  - Delete one arbitrarily chosen vertex of  $C$  from  $G$
- EndWhile
- Output the set of the deleted vertices

7. In the MAX-CUT problem, given an undirected graph  $G$  we want to partition the vertices of  $G$  into two parts  $(A, B)$  such that the number of edges between  $A$  and  $B$  is maximized. Prove that the following is a  $\frac{1}{2}$ -factor approximation algorithm for this problem:

- Let  $v_1, \dots, v_n$  be all the vertices of  $G$ .
- Initially set  $A = B = \emptyset$ .
- For  $i = 1, \dots, n$  do
- If  $v_i$  has more neighbours in  $A$  than in  $B$  then add  $v_i$  to  $B$ , otherwise add  $v_i$  to  $A$ .
- EndFor
